

PRESENTED BY UNIVERSITY OF HOUSTON

TAMEST NATURAL HAZARDS SUMMIT

*Responding
to and
Mitigating
the Impacts*

PART I: VIRTUAL SUMMIT

10.19.2021

#NATURALHAZARDSSUMMIT

Theme One:

PREDICTION, WARNING AND RESPONSE TO ALERTS AND WARNINGS

Moderated by:

KISHOR MEHTA, PH.D., P.E. (NAE)

**P.W. Horn Professor of Civil, Environmental
and Construction Engineering**

Texas Tech University

Panel:

Preparing for Future Disasters

ED HIRS, M.B.A.

**UH Energy
Fellow**

*University of
Houston*

CHIEF TONYA L.
HOOVER

**Acting Fire
Administrator**
*United States Fire
Administration*

DAVID ROBERT MAIDMENT,
PH.D. (NAE)

**Professor
Emeritus**
*The University of
Texas at Austin*

OLGA WILHELMI,
PH.D.

Research Scientist
*National Center for
Atmospheric
Research*

Responding to Floods

Presented by David R. Maidment
Center for Water and the Environment
University of Texas at Austin

19 October 2021

A New Flood Forecasting System for the United States

- A **National Water Center** was established on the Tuscaloosa campus of University of Alabama by the National Weather Service and federal agency partners
- It has a mission to assess hydrology in a new way at the **continental scale** for the United States

Texas Advanced Computing Center

Used to build Prototype of the National Water Model (2014-2015)

1.2 million gallon cooling tank

National Water Model

Water is now like weather – forecast everywhere all the time

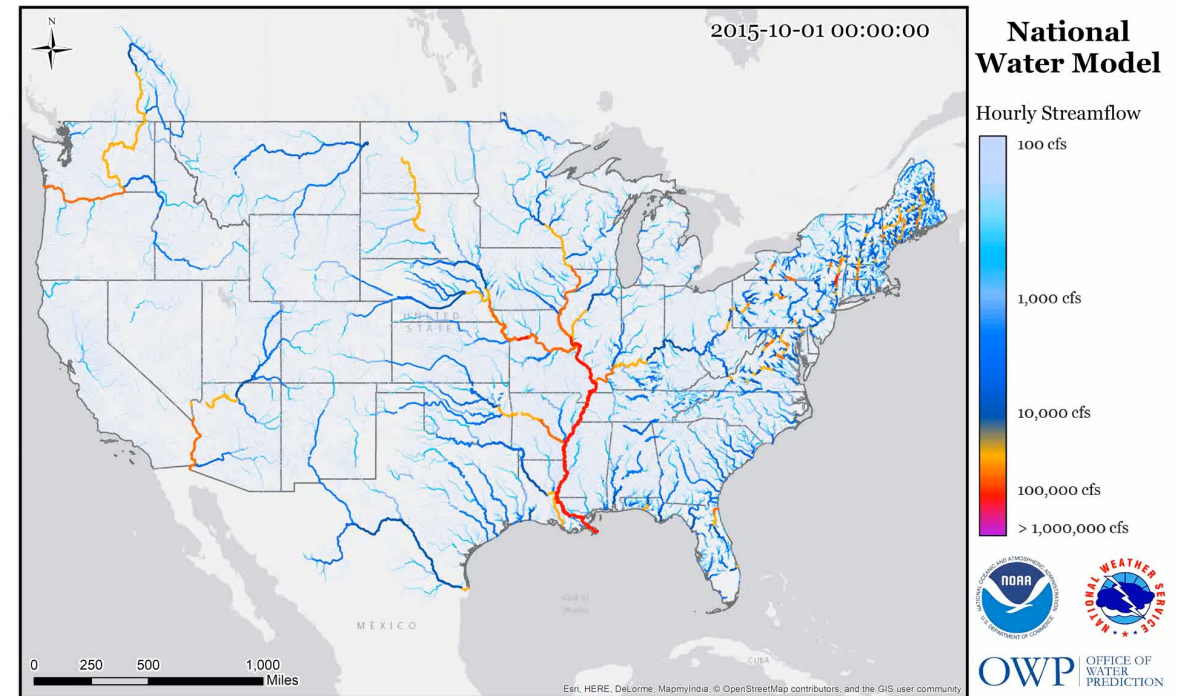

Operational Since 2016

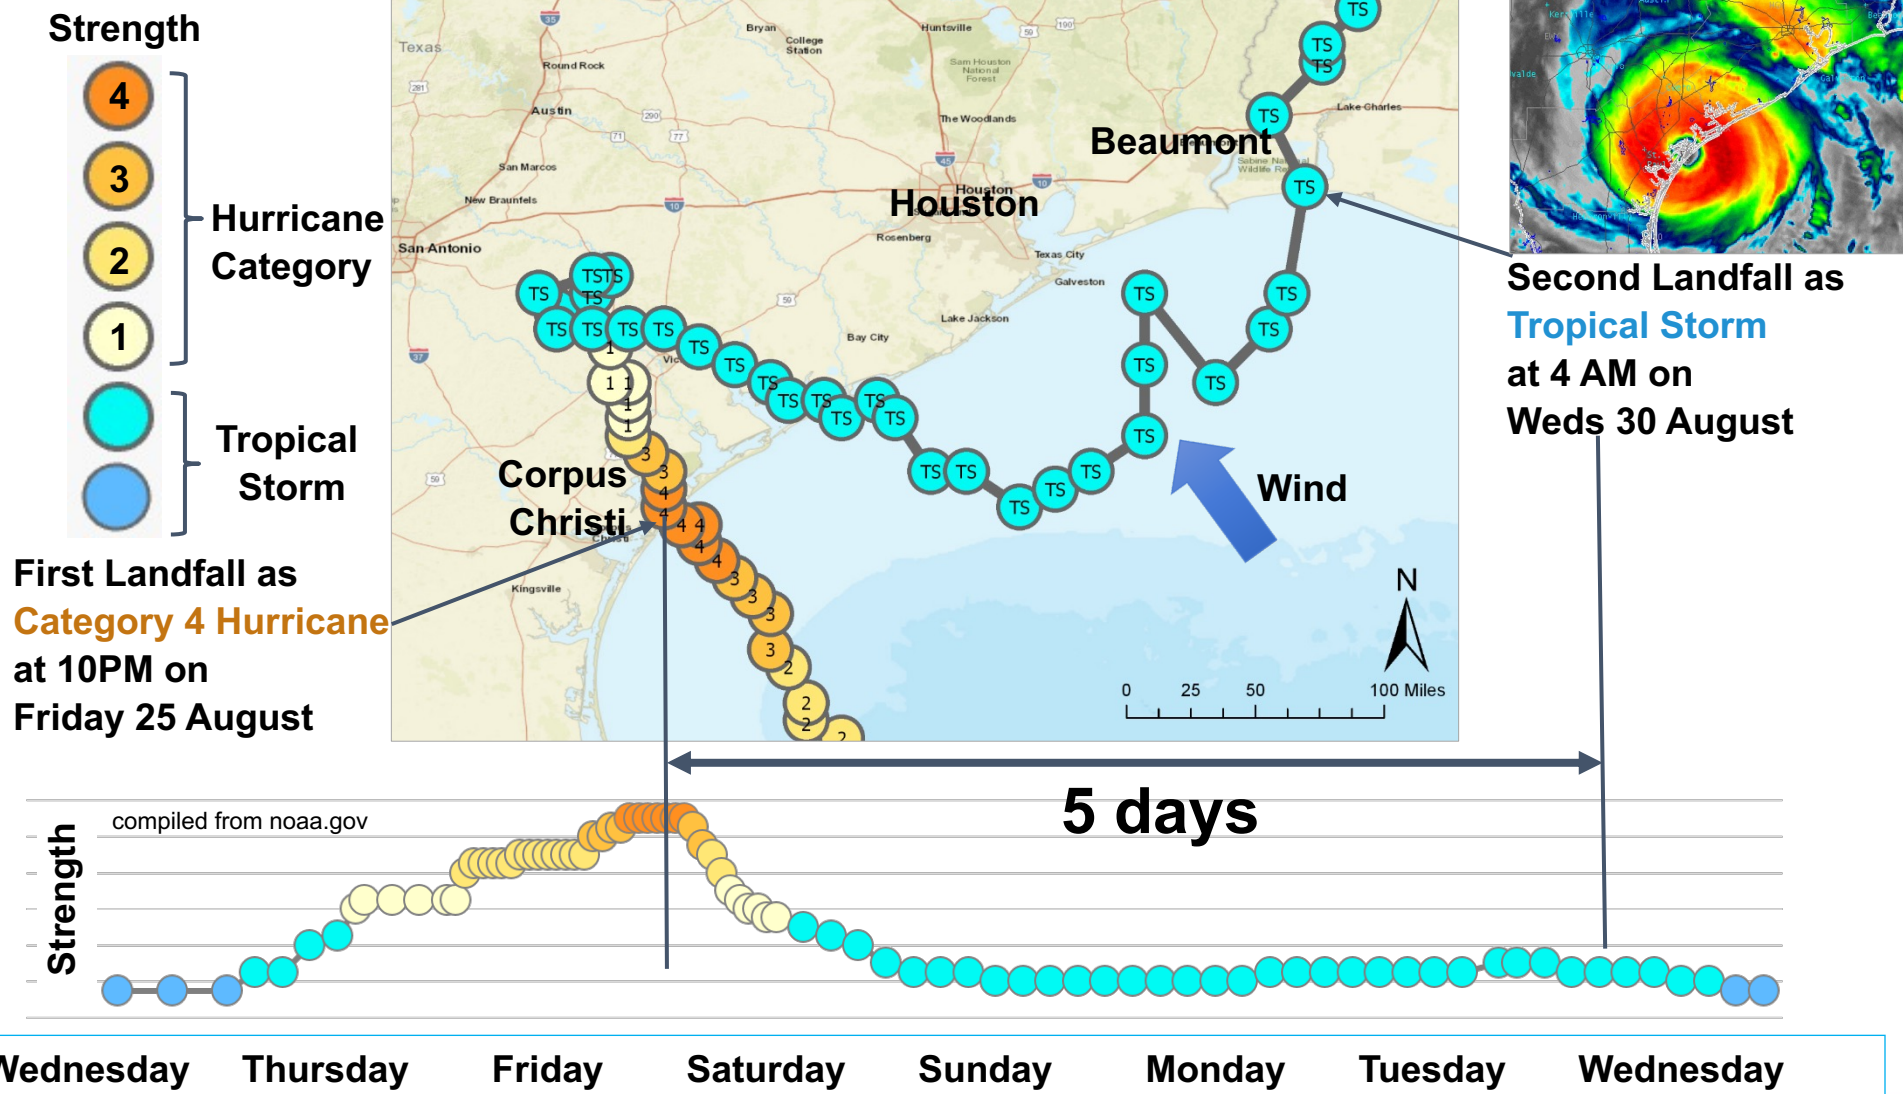

Forecast Configurations:

- 3-Hour and 28-Hour Analysis and **Assimilation** (Hourly and Daily)
- 18-Hour **Short Range** Forecast (Hourly)
- 10-Day **Medium Range** Forecast (6-Hourly)
- 30-Day **Long Range** Forecast (Daily)

Continuous water forecasting for
2.7 million stream reaches in US

Hurricane Harvey, August 2017

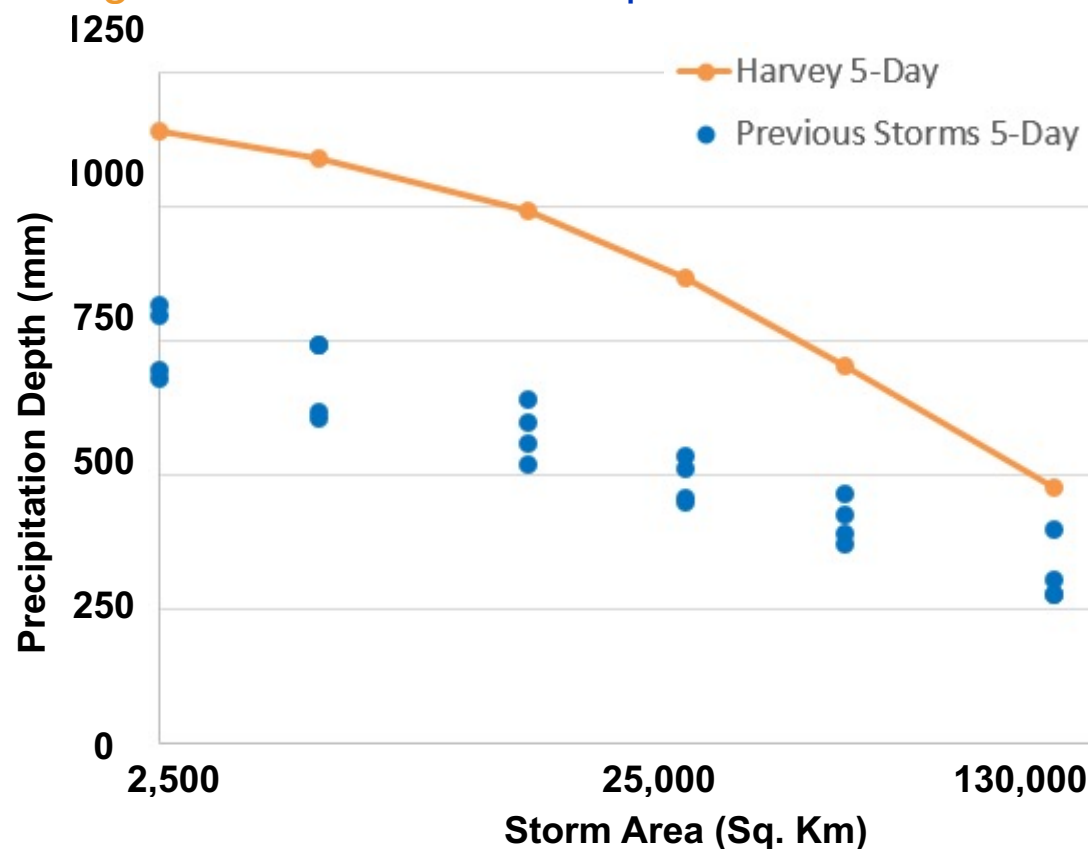

Hurricane Harvey – Record Precipitation

Harvey **2-day** precipitation was the **worst recorded storm** in US history

Harvey **3-day** Precipitation averaged **125 mm more** than **previous worst storms**

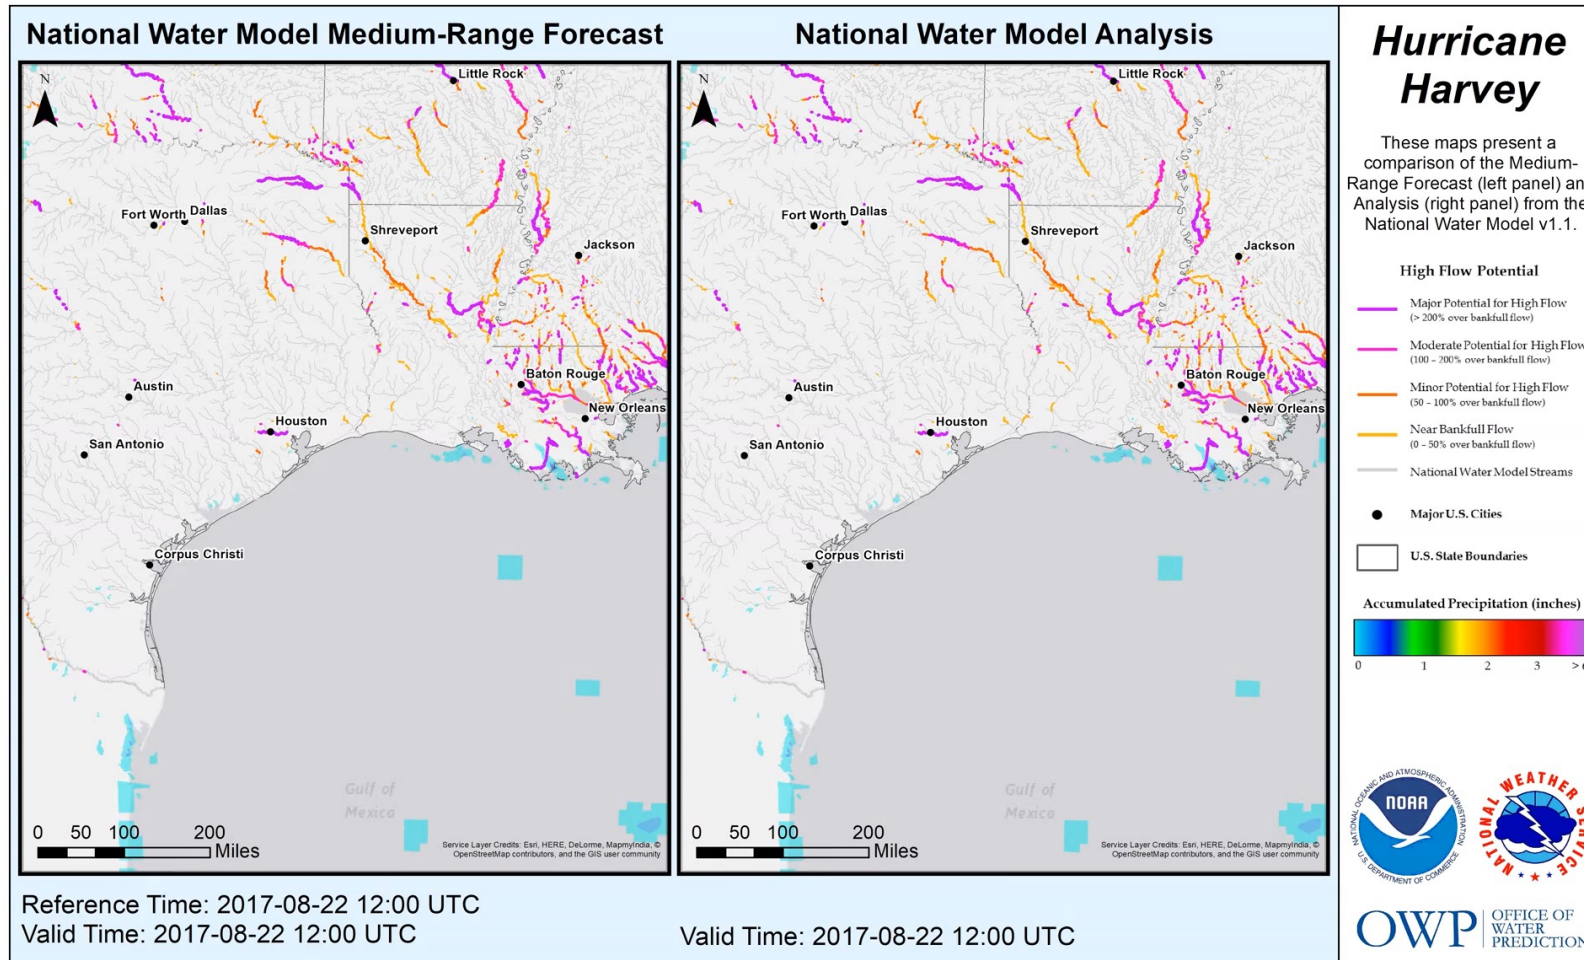

Harvey **5-day** Precipitation averaged **280 mm more** than **previous worst storms**

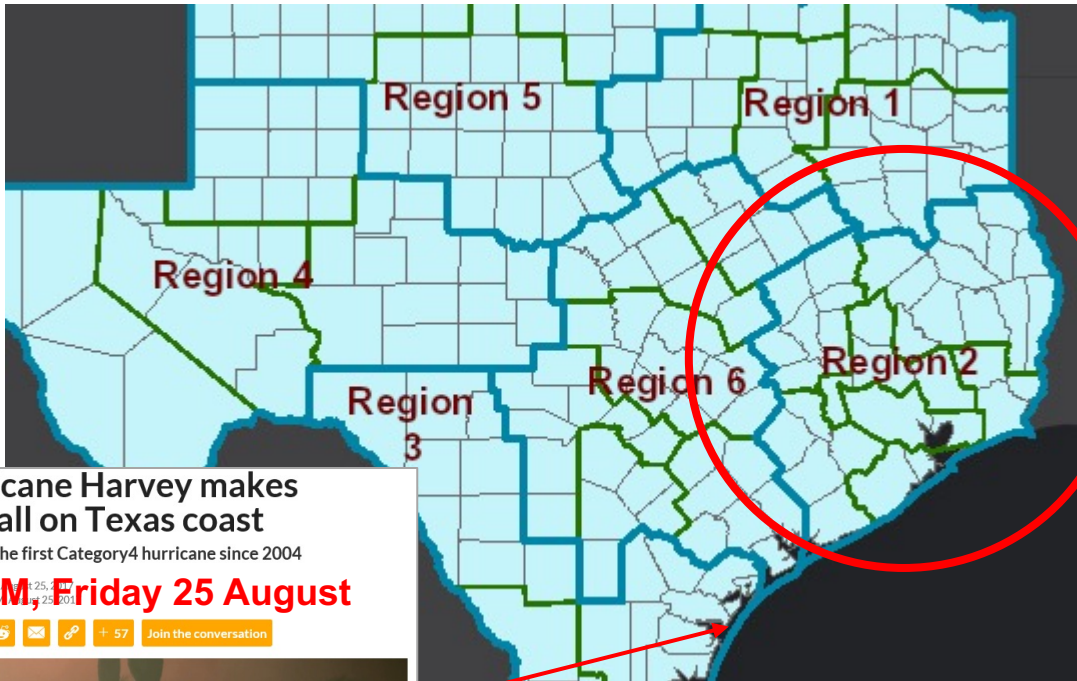

Forecasting Harvey using National Water Model

10-day Ahead Forecast

Actual

Forecasting the Flood Impact of Harvey

Location of flood impact in Houston was known before Hurricane Harvey reached coast
165 miles to Southwest

Using National Water Model Medium Range forecast

Houston is going to get inundated

Hurricane Harvey makes landfall on Texas coast
Harvey is the first Category 4 hurricane since 2004
10 PM, Friday 25 August

	Address Count	Time At Max
Region 2	238465	8/29/2017 6:00:00 AM
Region 6	22120	8/27/2017
Region 1	3209	9/2/2017
Region 4	1761	8/27/2017 3:00:00 AM
Region 3	1425	9/4/2017 12:00:00 PM
Region 5	103	9/4/2017 6:00:00 AM

Flooded Residential Buildings in Houston

Flood covered 64% of area of City of Houston

Source: City of Houston, Civis, Dewberry

Questions

- Are increases in flood severity and frequency anticipated?
- What are recent tools and models?
 - National Water Model is a tremendous innovation
 - Hydrology has always been “bottom up” from local watersheds
 - Now it is also “top-down” from continental scale – connecting cause and effect
- Where are gaps in knowledge?
 - Linking coastal, riverine and direct rainfall-based flooding
 - Dealing with the complexities of urban areas
 - Linking physical impact with social vulnerability
