GUN VIOLENCE & PUBLIC HEALTH
RONALD STEWART
Univ. of Texas San Antonio Surgery Department
Health Science Center Chair & Trauma Surgeon

So, what can we do? Well, using the common narrative, we can address this epidemic of violence by continuing to work together to do two things: One, work to understand and address the root causes of violence while simultaneously working together to make firearm ownership as safe as reasonably possible for those who own a firearm and those who do not.

– Ronny Stewart, MD June 2, 2022 American College of Surgeons
